

Essential GitHub Repositories

A Curated Guide for Data Analysts

Explore these five foundational repositories to enhance your data science skills, build your portfolio, and prepare for industry roles.

1. Awesome Data Science

`awesome-datascience`

<https://github.com/academic/awesome-datascience>

A curated list of tools, libraries, tutorials, and datasets for data science and analytics; great as a “one-stop” reference for learning paths and resources.

2. Data Science for Beginners (Microsoft)

`Data-Science-For-Beginners`

<https://github.com/microsoft/Data-Science-For-Beginners>

A 10-week beginner curriculum with hands-on labs and projects; ideal if you want structured, project-based practice as a fresher analyst.

3. Data Science IPython Notebooks

data-science-ipython-notebooks

<https://github.com/donnemartin/data-science-ipython-notebooks>

Ready-to-run notebooks covering Python data-analysis tools (pandas, matplotlib, scikit-learn, etc.), perfect for building a portfolio.

4. Pandas

pandas

<https://github.com/pandas-dev/pandas>

The foundational Python library for data cleaning, manipulation, and analysis; every data analyst should explore its docs and examples.

5. Data Analyst / Data Science Interview Questions

data-science-interviews

<https://github.com/alexeygrigorev/data-science-interviews>

A repository of real-world interview questions and solutions in SQL, Python, probability, and ML; very useful for job-prep and practice.

What's Next?

If you lean more toward **SQL/visualization** or **Python/machine-learning**, let me know. I can provide a second set of 5 repositories tailored specifically to your chosen path.
